MS Forestry Commission Deploys Heavy Equipment Boss to Colorado

JACKSON, Miss. – The Mississippi Forestry Commission (MFC) deployed one Wildland Firefighting Heavy Equipment Boss to Colorado, where this individual will assist state and federal partners with wildfire suppression efforts. This individual is normally stationed in Region Two of the Mississippi Forestry Commission, which serves the counties of Attala, Bolivar, Carroll, Choctaw, Clay, Grenada, Holmes, Humphreys, Kemper, Leake, Leflore, Lowndes, Montgomery, Neshoba, Noxubee, Oktibbeha, Sunflower, Washington, Webster, and Winston. His name will be released upon his safe return to Mississippi in approximately two weeks.

“We appreciate our employees taking part in these efforts to help our state and federal partners in Colorado. Fighting the destructive power of wildfire means that our Wildland Firefighters are working in extreme conditions protecting people’s lives, homes, and forestland,” said Charlie Morgan, State Forester. “We are proud of his service and look forward to his safe return home in approximately two weeks.”

The rapidly growing Spring Creek Wildfire is estimated to have burned over 41,000 acres, according to reports released on June 30, 2018. The Spring Creek Wildfire is currently spreading closer to La Veta, Colorado, forcing evacuations and road closings.

How the Mississippi Forestry Commission fights wildfires

MFC Wildland Firefighters “fight fire with fire”. They create a fire line (aka fire break) by using bulldozers to plow through vegetation (down to mineral soil) around the perimeter of the wildfire, then they light a controlled backfire along the inner edge of the fire line to consume additional vegetation – this lack of “fuel” for the wildfire creates a barrier to slow or stop the spread of the wildfire. However, their job is not yet finished – even after containment has been reached, wildland firefighters continue to monitor the area. Since the wind can spread hot embers across fire lines, new spot fires may occur as far away as one-half mile from the original wildfire that must be suppressed. Depending on the size, location, wind conditions, and intensity of the wildfire it may have to be monitored anywhere from several hours to several days to make sure the wildfire is no longer a threat to life, property, or forestland.

About the Mississippi Forestry Commission

Established in 1926, the [Mississippi Forestry Commission](#) (MFC) protects the state's valuable 19.8 million acres of forestland from wildfire, manages approximately 480,000 acres of forested School Trust Land, and delivers quality forest management services and assistance to both rural and urban landowners. Our mission is to provide active leadership in forest protection, forest management, forest inventory, and effective forest information distribution, necessary for Mississippi's sustainable forest-based economy. Mississippi's forestry and forest products industries have a \$12.79 billion economic impact and employ almost 70,000 people. Forestry consistently ranks as the state's second most valuable agricultural commodity, right behind the poultry industry. The MFC looks forward to the continued privilege of caring for Mississippi's trees, forests, and natural resources.
